■ Display When Power Is ON

When power is supplied, whole display parts turn ON for 1 sec. It displays model type (digits, size, alarm/sub output and control output, sensor, temp. range, unit). Afterward, it returns to RUN mode.

When input sensor break/sensor is not connected, it displays [oPE n]. In case of normal operation, it displays the present input temperature.

■ Error Display

Display	Description	Troubleshooting
oPE n	Flashes when a temperature sensor is broken or not connected.	Check the status of the temperature sensor. When the sensor is connected correctly, it is clear.
HHHH	Flashes when the measured input value is higher than the temperature range of the sensor.	When the measured temperature is within the temperature range of the sensor, it is clear.
LLLL	Flashes when the measured input value is lower than the temperature range of the sensor.
