Autonics

■ Proper Usage

◎ Input connection (AT11DN/AT11EN)

- Power circuit of AT11DN/EN timer does not use trans. Use isolation transformer which secondary part is not grounded as (Figure 1) to cut off peripheral current flow for supplied power to external input deivces.

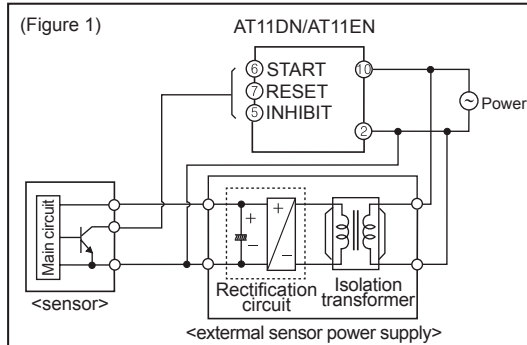

(Figure 1)

- As (Figure 2), if using terminal ⑩ as common terminal of input signal, it may cause damage to inner circuit of AT11DN/EN timer. Use terminal ② as common terminal referring to (Figure 3).

(Figure 2) (Figure 3)
- In order to apply input signals (INHIBIT, START, RESET), short-circuit the terminal no. ②-⑤, ②-⑥ or ②-⑦. It may cause internal circuit damage by wrong connections.
- Do not wire INHIBIT, START, RESET signal input line with power line, high voltage line in parallel.

◎ Common

- Please connect DC power input after checking polarity of power.
- In case of 12VDC model, isolated and limited voltage/ current or Class 2 sources should be provided for power supply.
- When applying the power to the timer, please apply the rated power at the moment by switch, relay, etc. Otherwise it might cause malfunction.
- When supply the power to the timer, connection shown in (Figure 4) might cause malfunction due to leakage current through R and C. Please connect R and C as shown in (Figure 5) to prevent malfunction.

(Figure 4) (Figure 5)
- It might cause malfunction if changing the setting time, time range or operation mode during unit operating unit. Please change the setting time, time range or operation mode after cut the power off.
- Do not use this unit at below places.
- Place where there are severe vibration or impact.
- Place where strong alkalis or acids are used.
- Place where there are direct ray of the sun.
- Place where strong magnetic field or electric noise are generated.
- Installation environment
- Indoor
- Altitude Max. 2,000m
- Pollution Degree 2
