

Protection House: ODS Black-Line & ODS Grey-Line.

This house is made of **Stainless Steel** and is primarily intended for **water cooling**. If heat radiation is very strong the house can be equipped with a **radiation shield** in front of the sensor.

The house is built with double walls on 5 of the 6 sides in order to have the sensor fully enclosed by water except at the back side. A sealed back plate allows for the sensor to fit snugly in the sealed of enclosure. Please see the dimensions on the next page.

The protection box can also be equipped with a heat radiation shield.
